The robust sample conditioning features, high-speed flow rate, and advanced sensor monitoring make the ECOM-J2KN Pro Industrial analyzer unmatched in accuracy and repeatability. The J2KN analyzer is used for fuel efficiency testing, combustion tuning, maintenance checks, and emissions compliance reporting. The types of fuel that can be tested on the J2KN Series include natural gas, oil, diesel, coal, wood, biomass, butane, propane, biodiesel, and other alternative fuels. Gasoline emissions may be tested with the ECOM-J2KN Pro Industrial, but this requires the NDIR bench (for CO). ecom analyzer manual, ecom d analyzer manual, ecom analyzer manual pdf, ecom analyzer manual user, ecom analyzer manual download, ecom analyzer manual software, ecom analyzer manual. Temperature sensors include flue gas temperature, ambient temperature, and sensor temperature. Draft and pressure are standard measured features. A high-range CO sensor is available for rich burn applications. The tactile keypad guides the operator through the various functions of the analyzer. Consistent flow and pressure of the gas sample assures accuracy of the gas measurement, evidenced by the in-line flowmeter, which allows the operator to monitor gas flow at all times. The J2K also features a SMOKE test function, handy for checking the integrity of Diesel Particulate Filters. An Automatic and Manual CO bypass function protects the CO sensor from over exposure. Sensor life generally averages 2-3 years due to proprietary design of sensor manifold and gas delivery system. ECOM offers custom length heated sample lines, if required for your applications. The J2KN is a portable emissions analyzer. Get Started Login here The ecom-EN3 also calculates CO2, efficiency and excess air. A strong, internal pump peltier peltier gas cooler with automatic condensate drain ensures proper sample conditioning, leading to better accuracy and longer sensor life. An on board printer, SD Memory Card and wireless Bluetooth are standard features. Common applications for the ecom-EN3 include set-up, maintenance and emission monitoring of natural gas, diesel, and oil fired boilers, burners, and reciprocating engines. The compact size, simple operation, and long battery life (6-8 hours) make the ecom-E3 a perfect tool for field technicians. What testing applications can the ecom-EN3-F be used for. Set-up, maintenance and emission monitoring of natural gas, diesel, and oil fired boilers, burners, and reciprocating engines. What does the ecom-EN3 measure. Please ask an ECOM sales associate for details. Be the first to review! Change File Login here. The CN also calculates NOx, CO2, Efficiency, Losses, Excess Air and Oxygen correction 0-20. Please ask an ECOM sales associate for details. An IR printer port transmits data to a portable printer for on-the-spot print-outs. The tactile keypad guides the operator through the various functions of the analyzer. An automatic shut-off activates when the gas cooler filter becomes saturated. Register and download the spec sheet for more information. Documentation cn-spec-sheet-2012.pdf. Page 4 Page 4 i. Important tips the ecom-en2-f meets the requirements for ctm 030, ctm 034, and astm d6522. In order to get correct measurement values: - allow 1 min. For auto-zero in fresh air - allow at least 2 min. For stable readings before taking measurement the following substances impair the instrme. Page 5 Page 5 i. Important tips (continued) before beginning with measurements, please set up condensation trap as follows: - pull knob out to unlock - swing the condensation trap a full 90deg up until it locks into place - The pin must be engaged before the pump starts not blocking fresh air opening. Page 6 Page 6 Connection of instrument design Air temperature slot for multi-media pressure sensor connections PA Connection of gas connection Pressure connection Connection Aux Complete printer sensors Graphic display control Contr optical flux. The gas radiates its heat to this metal body. A Peltier element (semiconductor cooling element). Page 11 Page 11 5. Power Supply It is recommended to power the AC energy when available. The analyzer can also be powered using the internal battery for a while(6 V; 3,8 AH). The battery must be recharged when the analyzer starts the sound signal or a warning message is displayed. The joke life can be. Page 12 Page 12 6. Data access on memory card (continue) The memory card must be 32 MB to 2 GB. After opening the housing, unlock the cooling device by pulling out the knob and swinging the coolest 90DEG upwards. The cooling device must be unlocked before the pump engages. 7. Page 14 Page 14 7. (superbia.lgb/f/otagamis/16530794413 Scanner start Press the red power button to activate the analyzer. Page 15 Page 15 8. Gas analysis 8.1. Gas analysis Display screen after automatic 1 minute phase, the instrument switches to measurement mode. The gas measurement values can be displayed on 4 display pages. Note: To view readings with O2 correction, see Ch. Page 16. Probe tip Page 16 8.1. Gas analysis Display screen (continue) The pressure goes to the "Edit" mode that allows the user to the line elements on the display screen. In the "Edit" mode, the values on the screen can be changed to what the user wants to see. To change these values, press F4 and you should see the 1 st. Page 17 Page 17 8.2 Insertion of the probe (continue) Perform measurement in the central flow of the exhaust gas channel (slow in the hottest gas temperature area). hot).The trend indication for T.GAS lets you know if the temperature is rising or decreasing so you can find the main flow. Page 18 Page 18 If the measurement values are stable, press the Save button (Number 6) to transfer values to the internal memory or F2 to the press. 8.5. Press F2 to print the values on the screen. To use the printer button (number 6 on the keyboard), you must press the save button (number 7 on. The analyzer will pick 1,63 liters of sample gas. - Release the filter card from the probe slot. 10. Soot test (continuous) -Load the grid on the chart of the soot test (0-9). -Input the result using the numeric keys and. Select each value to print all recorded snapshots along with the final average Select each value of 2 to print each other registered instant, etc. 5. Do not select Store. Leave DeFau. Page 25 Page 25. Check electrochemical sensors For the analysis of the gas is sent to a process of wear and do age.http://hermandadotropasnomadas.com/images/carel-pgd-user-interface-manual.pdf alter their output values along time depending on the concentration of gas, time exposure and the dirt degree of the gas championship. The program monitors the SE n-SORS and CORRE. Page 26 Data processing Based on the display of this menu, you need to insert a memory card (from 32 MB to 2 GB) into the analyzer. Note: This section explains how to save data snapshots in internal memory. For data recording on a memory card, see 6.6. Recording of data on memory card 6. Selection: search or create. In the case of a strong question (e.g. Permanently different measuring hours per day, approximate conditions etc.) Shorter intervals should be selected the controls. Page 29 The high-grade steel prefilter is within the condensation content. It should bewhen contamination (with hot and dry water). Unscrew condensed container and prefilter. Assemble after cleaning again in reverse order. The sensors are calibrated with the king. Page 30 probe and pipe 30 page 30 depending on the frequency of use, probe and pipe must be regularly clean in order to release particles deposits and to prevent early wear due to corrosion. - Release the connections to the instrument and the grip of the probe to free the tube. - Clean it (Warfish WA. Page 31: RBR MESSTECHNIK GMBH PAGE 31 15. Principle of the range of technical data parameters or 2.0. 21 Vol. Electrochemical Co 0. 4000 PPM Electrochemical No (Option) 0. 5000 PPM Electrochemical No 2 (Option) 0. 500 PPM Electrochemical Thus 2 (Option) 0. 5000 ppm co electrochemical (option) 4000. 63000 ppm electrochemo. Page 32 Page 32 16. In this case, I find important information on the tools. How long it is the time Duration of the life of the sensors. What sensors I can exchange. Page 33 suggestion page 33: if you have different tools of the same type, you can identify an error by exchanging accessories (probe, tube, temperature sensor etc.). For further Questions or problems, please contact the following authorized assistance center. My tool cannot be turned on! Page 34 Page 34 19. Calibration procedure for the best results, the concentration of the calibration gas should be the most Vic in the expected levels of possible emissions. Since each sensor is linear through a nominal range, a concentration of calibration gases can be used for a reasonably wide range of emission level. 19. Calibration procedure (followed) 3. It is necessary to check air losses before calibrating. Apply a gas with 0 o2 to check air losses (Ecom service Dept. Non balancing gas n2). Flow calibration gas for 3 minutes.
